Why Certified Scrum Master?

We teach each concept from the ground up, assuming you have no background in them. We focus a lot on real-world applied aspects of all the topics we cover, in addition to the theory. We have a vast repository of learning content ranging from fundamentals to advanced levels. Our content is always focused and revised, refreshed to meet industry standards. We focus on the level of participants' skills in line with the growing industry needs.

1) Defined/ Empirical Process

A defined process relies on a well-elucidated set of actions with the same inputs that generate the same output. It is an efficient process to imply when the working environment is less volatile.

An empirical process on the other hand, implies that a particular task is accomplished by leveraging the principles of examining and experimenting. It relies on the core ideas of transparency, inspection, and adaptation.

2) Agile Introduction

Agile software development encompasses software development methodologies that emphasize on iterative development. In this method, requirements and solutions are obtained by a collaboration between the self-organized and cross-functional team. It aims in promoting a disciplined project management process that encourages constant assessment and adaptation.

- a) Agile History
- b) Agile Framework
- c) Agile Manifesto
- d) Agile Principles

3) Scrum Values

Scrum methodology is established on five values that each team member uses to make effective individual decisions. These are simple values that are imperative for the successful implementation of Scrum.

The five values of Scrum include:-

- Commitment
- Openess
- Respect
- Courage
- Focus

4) An Aerial View of Scrum

Scrum is basically an agile process that enables developers to deliver high business values in the most effective manner. It allows an organization to constantly monitor the development process, typically every two weeks to one month. Furthermore, it allows the team to set priorities and organize themselves in the most efficient way in order to deliver the highest priority elements.

5) Scrum Framework

Scrum Framework focuses on effective team collaboration to streamline complex software projects. The bedrock of Scrum Framework relies on Lean Thinking (emphasizes on how to organize human activities) and Empirical Process Control that focuses on transparency, inspection and adaptation. It incorporates a set of guidelines that offer organized structure to help team members reduce technical, enterprise, and interpersonal hindrances associated with software development and empower them to achieve the end goal.

Learning Support

Hear From The Learners

Narasimha is a veteran IT guy who holds excellent knowledge of Scrum and product management. He has cleared my all concepts for product owner. The session is so interactive that making mistakes is also acceptable. He is a wonderful coach who made this 3 days journey a wonderful trip from product discovery to development.

Sameer Chivate
SAFe 4 Agilist

The training was great with real-time examples which helped understanding the concepts even better. Also, there were multiple activities which kept the topic interesting.

Srinivas Anusuri
Project Manager

Narasimha Reddy Bommaka made sure that each and every participant should understand the concepts and terminologies. Excellent delivery of the training, good hold on the topics and most important "NO PRESENTATION". Everything had been taught through activities by creating the actual project scenarios. Wonderful !!

Tania Dutta
Scrum Master

Done multiple courses with Staragile and all the courses were perfectly managed with well experienced trainers. One point for great learning. Keep it up Staragile team

Priya Jain
Certified ScrumMaster®

The staff is very helpful. The training materials are easy to understand. Trainers are excellent. Overall very good experience with StarAgile.

Sneha Deshpande
Project Manager

Trainer - Narasimha had good understanding on Agile & Scrum Concepts. It was two way communication session with proper time management and no ppt . Would recommend for other folks who are looking out to learn the Scrum Fundamentals.

Aditya Soudagar
QA Manager
